

Solution Requirements

Date	29-09-2026
Team ID	SWTID-2026-3226
Project Name	CRICKSTATS
Maximum Marks	5 Mark

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users securely log in to Salesforce and access the CRICKSTATS application using authorized accounts	High
2	Authorization levels	Only authorized users can access or modify player and match performance records according to their Salesforce permissions.	High
3	External interfaces	<i>The system uses Salesforce Lightning, Salesforce Cloud,</i>	Medium

		<i>Salesforce Objects, Flows, Reports and Dashboards.</i>	
4	Transactions processing	Users can enter and update player details and match-wise performance such as runs, balls, fours, sixes, overs and wickets.	High
5	Reporting	The system generates reports and dashboards to display player statistics, performance summaries and comparisons	High
6	Business rules, etc.	Player and match records are connected through relationships. Roll-up summary fields calculate total runs, wickets, fours, sixes, matches and other statistics.	High
7	Compliance to laws or regulations	The system should protect application data and provide controlled access to authorized Salesforce users	Medium
8	<i>Other</i>	Data validation should reduce incorrect or incomplete entries. The system should provide team-based player filtering using Salesforce Flow.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	The application should provide reasonable response time while entering records and opening reports or dashboards.	Quick record access, efficient report generation and smooth dashboard loading
2	Scalability	The system should support growth in players, matches, teams and competitions.	Should accommodate additional player and match records without changing the basic structure.
3	Security & Data Privacy	The application should provide secure login, proper permissions, controlled record access and protection of application data.	Only authorized Salesforce users can access or modify records.
4	Reliability & Availability	The system should remain accessible to authorized users when they need to enter or review cricket statistics.	Cloud-based access, minimal interruption and data recovery support.
5	Usability & Accessibility	The application should be simple and user-friendly, with clear navigation, readable forms and easy access to records.	Users can enter player/match details and view saved records without unnecessary steps.
6	<i>Other</i>	The system should use organized Salesforce objects, relationships, flows and reports so that additional features can be added later.	Support future enhancements such as mobile integration, AI-based performance prediction and player ranking.
