### Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

### Current System Limitations:

| S.No | Limitation                                                                  | Impact                                                                                  | Priority to Address (High / Medium / Low) |
|------|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|-------------------------------------------|
| 1    | Match statistics are entered manually for every player and match            | Slows data entry and increases the chance of incomplete or incorrect records            | High                                      |
| 2    | Internet dependency and limited offline access (cloud-based Salesforce app) | Users cannot enter or review statistics without a connection during matches or practice | Medium                                    |
| 3    | Flow only filters players by team; no ranking or trend prediction yet       | Analysts must compare players and find trends manually using reports                    | Medium                                    |

### Scalability Plan:

| S.No | Scalability Aspect | Current State                                                           | Proposed Upgrade / Solution                                                                                                                           |
|------|--------------------|-------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | User Load          | Small academic dataset with a few players and teams                     | Same object and relationship structure supports more teams, competitions and users; add profiles / permission sets per role (coach, manager, analyst) |
| 2    | Data Storage       | Player and Match Performance records stored in Salesforce cloud         | Move to a larger Salesforce edition with more data storage; archive old seasons and use bulk data loading for match records                           |
| 3    | Performance        | Roll-up summaries, reports and dashboards load quickly for current data | Use filtered reports, summary dashboards and efficient queries so reports stay fast as matches grow                                                   |
| 4    | Security           | Secure login; only System Administrator profile can access the app      | Add role-based profiles, field-level security, sharing rules and multi-factor authentication for larger user groups                                   |

### Future Roadmap:

| Phase | Planned Feature / Enhancement | Target Timeline | Expected Impact |
|-------|-------------------------------|-----------------|-----------------|
|-------|-------------------------------|-----------------|-----------------|

|         |                                                                                            |                    |                                                                                |
|---------|--------------------------------------------------------------------------------------------|--------------------|--------------------------------------------------------------------------------|
| Phase 2 | Mobile application integration for quick match-time entry; AI-based performance prediction | Q1 2027 (proposed) | Faster data entry during matches and early trend / form prediction for coaches |
| Phase 3 | Player ranking system and video analysis integration                                       | Q2 2027 (proposed) | Objective player comparison and richer performance review                      |
| Phase 4 | Public statistics portal and multi-league support                                          | Q3 2027 (proposed) | Wider access to statistics and support for more teams and competitions         |
